

The Commission will rigorously enforce the legislation related to the energy performance of buildings. This will start with an assessment in 2020 of Member States' national long-term renovation strategies¹⁶. The Commission will also launch work on the possibility of including emissions from buildings in European emissions trading, as part of broader efforts to ensure that the relative prices of different energy sources provide the right signals for energy efficiency. In addition, the Commission will review the Construction Products Regulation¹⁷. It should ensure that the design of new and renovated buildings at all stages is in line with the needs of the circular economy, and lead to increased digitalisation and climate-proofing of the building stock.
